# 1 Overview

The purpose of this document is to provide clear instructions on how to install and use RR3740A Controller on Ubuntu 16.04.1 system.

## 2 Installing Ubuntu 16.04.1 on RR3740A controller

If you would like to install Ubuntu 16.04.1 onto drives attached to RR3740A controller, please perform the following operations:

### Step 1 Prepare Your Hardware for Installation

**Notcie:** If your FT2000 motherboard is not directly connected to the SSD disk, it is normal for the buzzer to sound continuously. You can communicate with the motherboard supplier to mute it.

After you attach your hard disks to RR3740A controller, you can use RR3740A **EFI Utility** Utility to configure your hard disks as RAID arrays, or just use them as single disks.

Before installation, you must remove all the disk drives, which are not physically attached to RR3740A controller, from your system.

#### Note

---

If you have other SCSI adapters installed, you must make sure the RR3740A controller EFI will be loaded firstly. If not, try to move it to another PCI slot. Otherwise you may be unable to boot up your system.

---

### Step 2 Check System EFI Settings

In your system BIOS SETUP menu, change **Boot Sequence** in such a way that the system will first boot from **EFI** CDROM, and then from SCSI. Refer to your SCSI manual to see how to set boot sequence.

If your EFI settings do not support such a boot sequence, you can first set it to boot from EFI CDROM. After you finish installation, set SCSI as the first boot device to boot up the system.

### Step 3 Flash UEFI Rom to RR3740A

- a. Unzip RR3740A UEFI package to root dir (/) of a USB flash driver, and insert the USB flash drive to the motherboard;
- b. Booting from the UEFI USB flash and enter the UEFI environment;

- c. Command with “rr3740a.nsh”, flash UEFI rom to RR3740A Controller and reboot;

```
FS0:\> rr3740a.nsh
FS0:\> load.efi 3740uefi.rom
Load Utility for Flash EPROM v1.1.1
(built at May 17 2022 14:24:22)

Set flash size to 91K
Found adapter 0x37401103 at PCI 4:0:0
Flash size 0x16c00, File size 0x16a00
Offset address 0x20000
EPROM Vendor: WINBOND W25X40BU
Erasing .....Succeeded
Flashing ....

Flashing Success (total retry 0)

Verifing ....

Passed !
FS0:\>
```

### Step 4 Create Array

- a. Attach two SATA to RR3740A Controller;

**Note**

---

Make sure your USB flash partition format is FAT32.

---

- b. Boot, in the presence of the motherboard Log screen, there will be SATA information:

```
HighPoint RocketRAID RR37xx Controller UEFI driver version v1.0.0.0
Find controller ID:3740, Location: 4:0:0
Start scanning devices...
[04:00 09/00] SATA Device probed.
[04:00 11/00] SATA Device probed.
Adding HPT UDO-0 (SINGLE) Capacity 18000GB BlockSize 512 Bytes
Adding HPT UDO-1 (SINGLE) Capacity 3000GB BlockSize 512 Bytes
```

- c. Enter the motherboard’s Boot List and select start from UEFI USB flash:

- d. Command "Arraycreate.efi" to enter the Utility:

```
FS0:\> ArrayCreate.efi
Highpoint RAID utility for UEFI (version: 20220517)
Vendor: HighPoint Technologies, Inc.
Product: RocketRAID 3740A Controller

==== Physical device list(count 2):
1/10 WDC WUH721818ALE6L4-3WJK2BUJ, 18000207MB (MaxFree 0MB), Normal [UC]
1/12 TOSHIBA DT01ACA300-Y731JWPAS, 3000592MB (MaxFree 0MB), Normal [UC]

==== Logical device list(count 2):
1 1/10 WDC WUH721818ALE6L4-3WJK2BUJ, 18000207MB (MaxFree 0MB), Normal [UC]
2 1/12 TOSHIBA DT01ACA300-Y731JWPAS, 3000592MB (MaxFree 0MB), Normal [UC]

-----
>>> Please specify command to execute:
<<< _
```

- e. Command "create RAID1 ".  
Create RAID1 array with all disks and with maximum capacity.

```
<<< create RAID1
Creating array: RAID1_000041A7.
Array created successfully.

==== Physical device list(count 2):
1/10 WDC WUH721818ALE6L4-3WJK2BUJ, 18000140MB (MaxFree 1499636MB), Normal [UC]
1/12 TOSHIBA DT01ACA300-Y731JWPAS, 3000504MB (MaxFree 0MB), Normal [UC]

==== Logical device list(count 1):
1 [VD0] RAID1_000041A7 (RAID1), 3000504MB (Stripe 512KB), Normal
1/10 WDC WUH721818ALE6L4
1/12 TOSHIBA DT01ACA300

-----
>>> Please specify command to execute:
<<< _
```

- f. Command "exit", exit the UEFI environment;
- g. For more command usages, refer to Appendix A.

### Step 5 Install Ubuntu 16.04.1

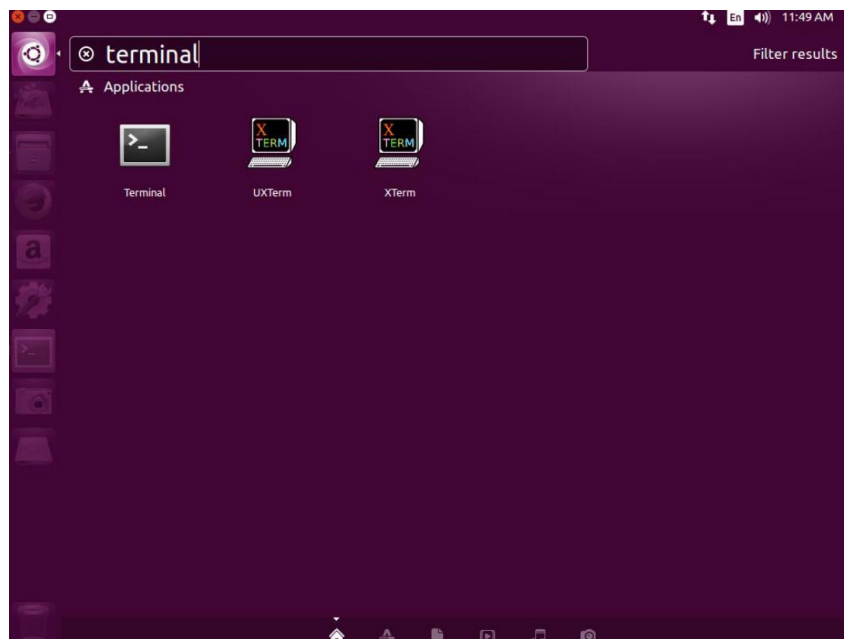

Insert the USB diskette in to the USB port.

- 1) Start installing Ubuntu 16.04.1 by booting from the installation CD/DVD.
- 2) On the startup screen. Just select "Try Ubuntu without installing", and then press ENTER to start up the system.

3) When enter the Ubuntu desktop.

Click the icon on the Left-Top corner, and input “terminal” on the prompt box:

Click the “Terminal” icon to run Application “Terminal”

And execute following command in the new Terminal :

```
$ sudo mount /dev/sdb1 /mnt
```

```
$ mkdir /tmp/hptdd
```

```
$ tar xf /mnt/RR3740A_840A.....tgz -C /tmp/hptdd/
```

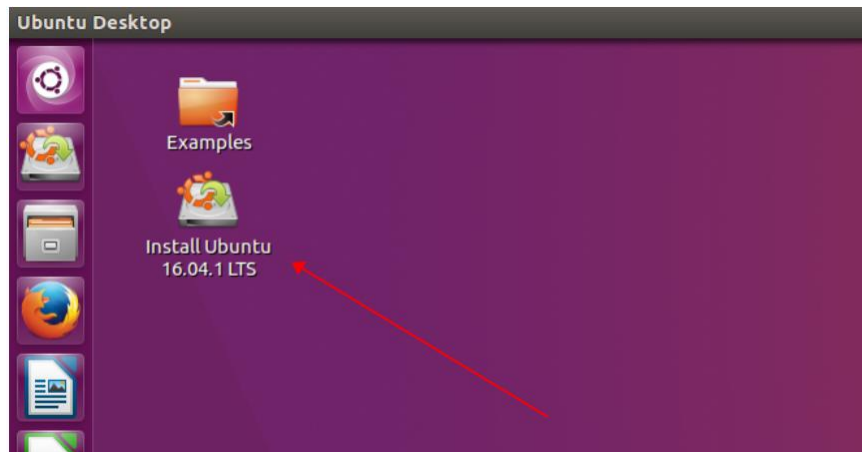

```
$ sudo umount /mnt
```

And then unplug the USB disk from the system, and execute following command to install the driver to install system.

```
$ sudo sh /tmp/hptdd/preinst.sh
```

```
Terminal
ubuntu@ubuntu: /
ubuntu@ubuntu:/$ sudo mount /dev/sdb1 /mnt/
ubuntu@ubuntu:/$ mkdir /tmp/hptdd
ubuntu@ubuntu:/$ tar xf /mnt/RR3740A_840A_Ubuntu_16.04.1_x86_64_v1.23.12.22_12_1
2.tgz -C /tmp/hptdd/
ubuntu@ubuntu:/$ sudo umount /mnt
ubuntu@ubuntu:/$ sudo sh /tmp/hptdd/preinst.sh
This step succeeded!
ubuntu@ubuntu:/$
```

- 4) Click the “Install Ubuntu 16.04.1 LST ” icon on the desktop to start installation.

Do **Not** select “Download updates while installing Ubuntu”

- 5) When the installation prompts that “Installation complete”

`$ sudo sh /tmp/hptdd/postinst.sh`

```
ubuntu@ubuntu:~$ sudo sh /tmp/hptdd/postinst.sh
mount: failed to read mtab: No such file or directory
We have completed the driver installation.
ubuntu@ubuntu:~$
```

And then click “Restart Now” or “Continue Testing” to complete the installation.

### 3 Installing RR3740A driver on an Existing System

#### Note

If you use a SCSI adapter to boot your system, you must make sure the RR3740A controller EFI will be loaded after that adapter’s EFI. If not, try to move it to another PCI slot. Otherwise you may be unable to boot up your system.

## Step 1 Obtain and install the Driver Module

Extract the driver archive to a temporary directory and execute the **install.sh** to install the driver to the system. For example:

```
# mkdir /tmp/dd
# tar xzvf RR37xx_8xx_28xx_Linux_X86_64_Src_v1.xx.xx_22_xx_xx.tar.gz
-C /tmp/dd
# cd /tmp/dd
# sh install.sh
```

If the driver of previous version has been in the initrd image, the installer will update the initrd image or it will make the driver automatically loaded while system up.

## Step 2 Configure System to Mount Volumes when Startup

Now you can inform the system to automatically mount the array by modifying the file `/etc/fstab`. E.g. you can add the following line to tell the system to mount `/dev/sda1` to location `/mnt/raid` after startup:

```
/dev/sda1    /mnt/raid    ext3    defaults    0 0
```

## 4 Monitoring the Driver

Once the driver is running, you can monitor it through the Linux proc file system support. There is a special file under `/proc/scsi/rr3740a/`. Through this file you can view driver status and send control commands to the driver.

### Note

---

The file name is the SCSI host number allocated by OS. If you have no other SCSI cards installed, it will be 0. In the following sections, we will use x to represent this number.

---

Using the following command to show driver status:

```
# cat /proc/scsi/rr3740a/x
```

This command will show the driver version number, physical device list and logical device list.

## 5 Installing RAID Management Software

HighPoint RAID Management Software is used to configure and keep track of your hard disks and RAID arrays attached to RR3740A controller. Installation of the management software is optional but recommended.

Please refer to HighPoint RAID Management Software documents for more information.

## 6 Rebuilding Driver Module for System Update

When the system updates the kernel packages, the driver module `rr3740a.ko` should be built and installed manually before reboot.

To build the driver module, the RR3740A open source package and the following building packages are needed: gcc, kernel-devel. The open source package can be got from HighPoint website: <http://www.highpoint-tech.com> while the building tools can be installed from CentOS website: <http://www.centos.org>

**Note:** the package version of kernel-devel should be the same to the updated kernel package.

Refer to the REAME file distributed with HighPoint RR3740A open source package on how to build and install the driver module.

## Appendix A

### Support command: help/info/quit/exit/create/delete.

- **Create Command**

**Syntax**

Create Array Type (RAID0/RAID1/RAID10) Member Disk list  
(1/1,1/2|\*)Capacity(100|\*)

**Examples**

<<< create RAID0

<<< create RAID0 \*

<<< create RAID0 \*\*

Create RAID1 array with all disks and with maximum capacity.

<<< create RAID1 1/1, 1/3 10

Create RAID1 array with disk 1/1 and 1/3 and with 10GB capacity.

<<< create RAID10 \*

Create RAID10 array with all disk and with maximum capacity.

- **Delete Command**

**Syntax**

delete {array ID}

**Examples**

<<< delete 1

Delete the first array from Logical device list.

<<< delete 2

Delete the second array from Logical device list.

- **Info Command**

**Syntax**

info

Display physical device list and logical list

- **Exit Command**

**Syntax**

Q/q/quit/exit

Quit the application

- **Help Command**

**Syntax**

H/h/help

This is help message.
