## 1 Overview

This guide explains how to install CentOS to an NVMe SSD or array hosted by the SSD6202 controller.

For CentOS 8.3

Mirror link: [http://isoredirect.centos.org/centos/8/isos/x86\\_64/](http://isoredirect.centos.org/centos/8/isos/x86_64/)

## 2 Installing CentOS 8.3 to the SSD6202 controller

### Step 1 Prepare Your Hardware for Installation

After installing the NVMe SSDs into the SSD6202 controller, you can to configure the SSD's as a RAID array, or use them as separate, single disks.

Before installation, you must temporarily remove all the NVMe SSD, which are not physically attached to SSD6202 controller, from your system. These can be reinstalled after CentOS is up and running.

---

**Note:** CentOS 8.3 requires UEFI Boot support when used with the SSD6202. If you have other SCSI-class adapters installed, you must make sure the SSD6202 controller UEFI support is loaded first; otherwise the system may be unable to boot. If the SSD6202 is not loading first, try moving it to another PCIe slot.

---

### Step 2 Create an Array

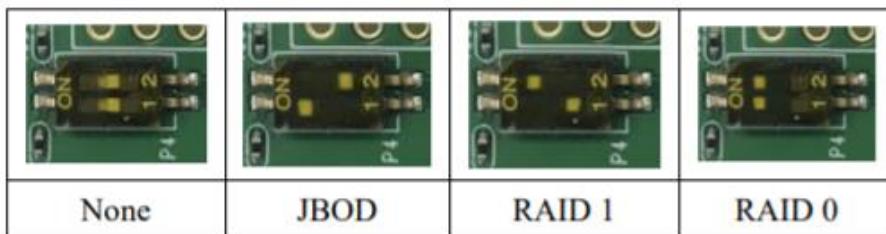

If you would like to configure a RAID array using NVMe SSD's hosted by the SSD6202, please select 1 of the following 5 Methods.

#### Method 1: Create a RAID array via RAID Switch settings

1. Connect two NVMe SSD's to the SSD6202.

*Note: Make sure that there is no RAID or residual partitions in the two NVMe SSD's.*

2. Create RAID arrays via RAID Switch settings.

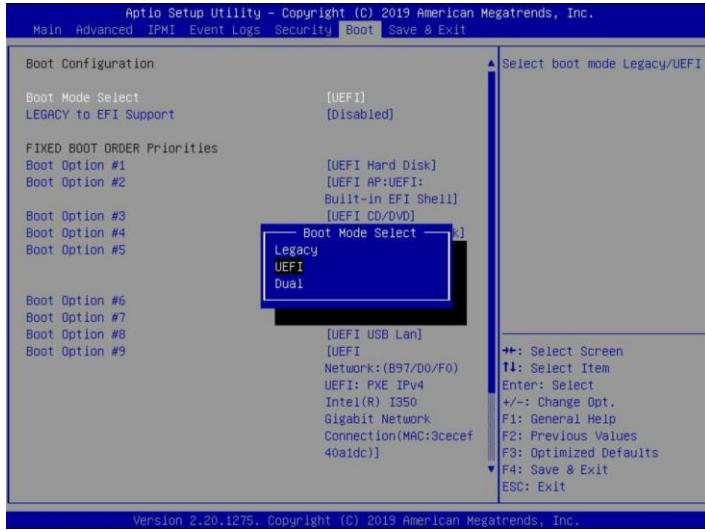

*Note: If you don't want to use RAID Switch to create RAID, please make sure the switch setting is None.*

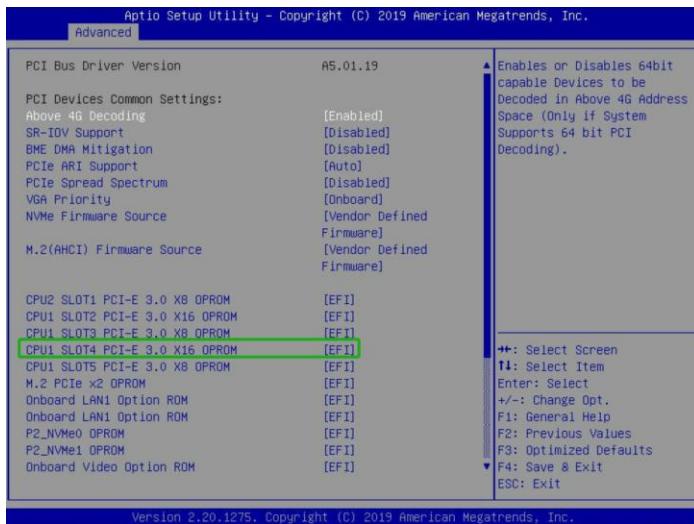

## Method 2: Create a RAID array using the Motherboard BIOS

*Using the SuperMicro H11DSi motherboard as an example:*

- Set 'Boot mode select' to 'UEFI'.

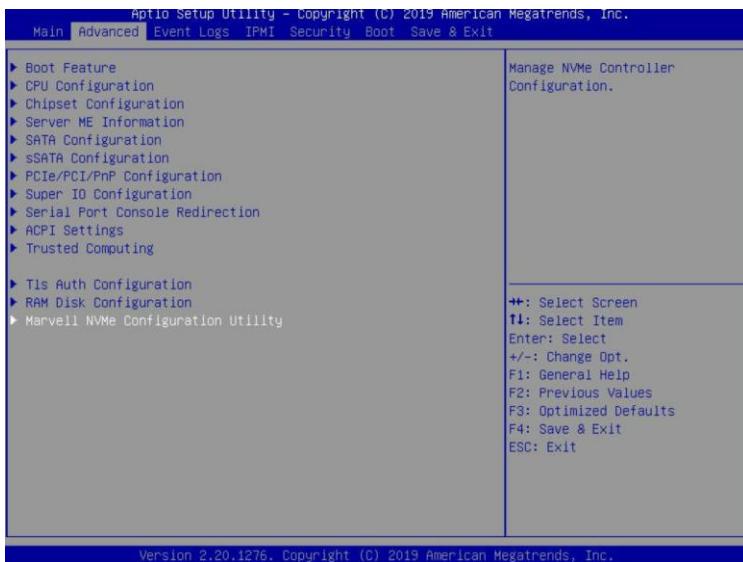

- Next, under "Advanced->PCIe/PCI/PnP Configuration", change "CPU Slot x PCI-E OPROM" to "EFI". "x" refers to the slot number (slot 2 was used when the screenshot was taken). Please consult the motherboard manual for more information.

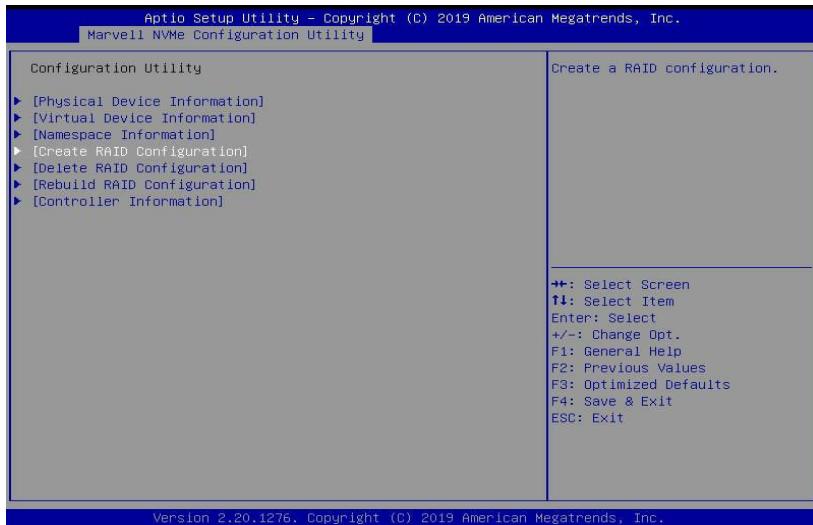

### 3. Creating the RAID array:

- Select "Advanced→Marvell NVMe Configuration Utility"

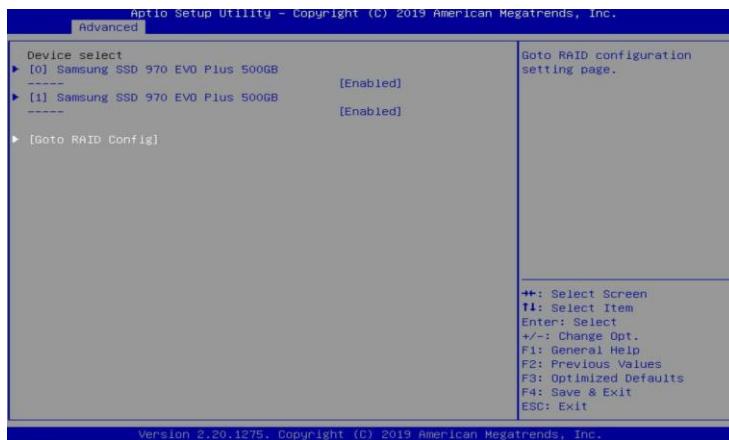

**Note:** If you cannot find “**Marvell NVMe Configuration Utility**” in the motherboard BIOS under “**advanced**” interface, you will need to create the array using one of the other four methods.

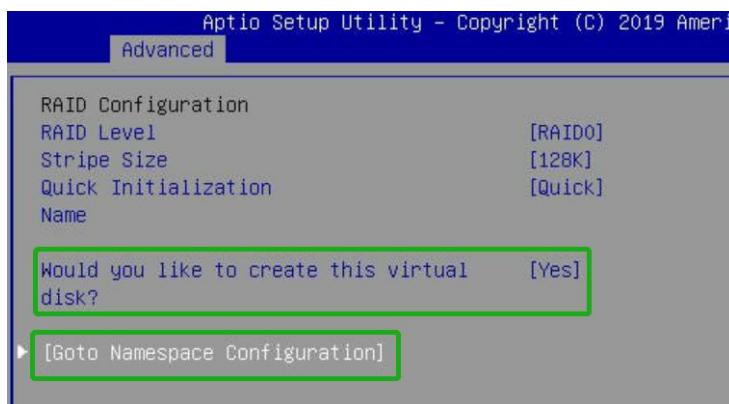

- Next, select “Create RAID Configuration”. Press “Enter” to open the Configuration Utility.

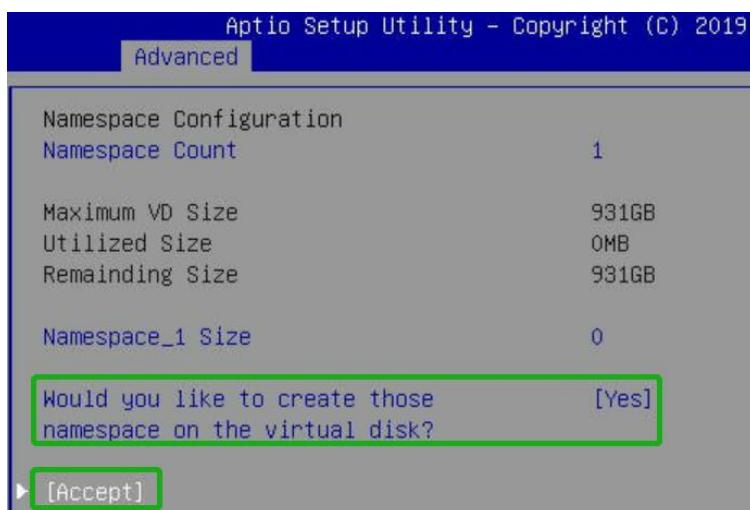

- Set “**RAID Configuration Menu**” to “**Enabled**”, and then select “**Goto RAID Config**”.

- d. For “Would you like to create this virtual disk? ” select “Yes”, then select “Goto Namespace Configuration”.

- e. For “Would you like to create those namespace on the virtual disk? ” select “Yes”, then select “Accept” to create the RAID0 array.

- f. When the page displays “Successful!” select OK, to exit the menu;

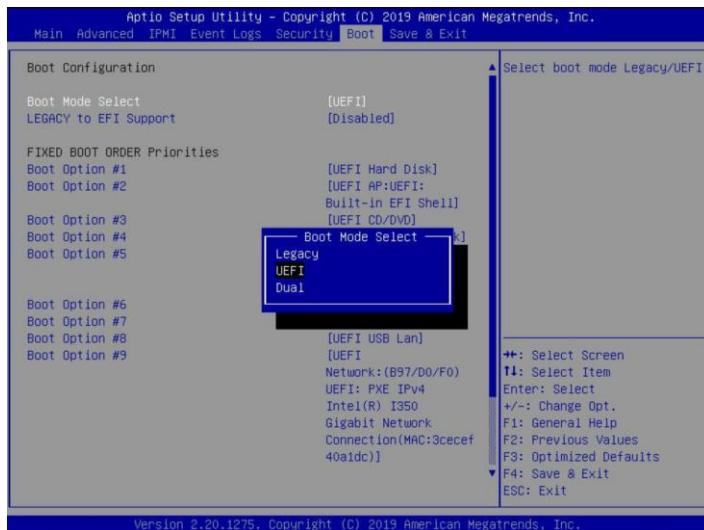

### Method 3: Create RAID in UEFI

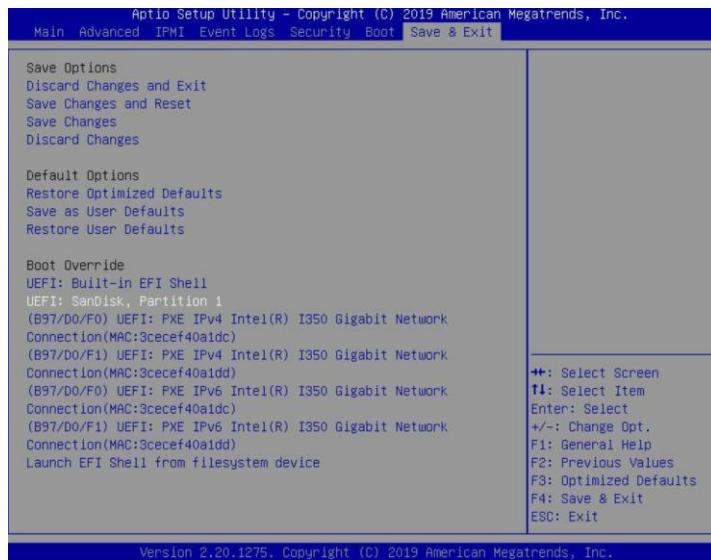

- First, prepare the UEFI Tool. This file should be copied to the root of a bootable USB flash drive.

*Using the SuperMicro H11DSi motherboard as an example:*

- Set 'Boot mode select' to 'UEFI';

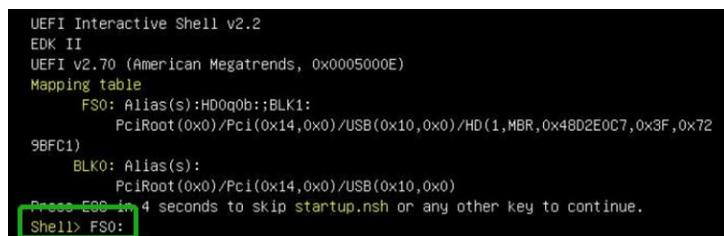

- Choose to boot from the USB flash drive (shown as "**UEFI: SanDisk, Partition 1**" for the example below):

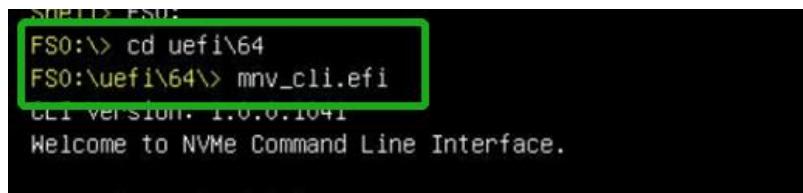

4. After entering the UEFI Shell, select "FS0:" to access the USB flash drive:.

*Note: "FS0" is the name of the USB flash drive used for this example*

5. Next, locate the “mnv\_cli.efi” program and run it:

*Note: if the CLI reports that “No NVMe Controller is found”, please see Appendix – Troubleshooting.*

6. To create a RAID0 array using two NVMe SSD’s, enter the following command:

**create -r 0 -d 0,1**

```
> create -r 0 -d 0,1
Create virtual disk successfully.
> -
```

For more CLI commands, please download the CLI manual from the product page of the official website.

**Method 4: Create the RAID array using a Windows operating System, and the WebGUI management software:**

1. This method assumes you have access to a Windows Server 2019 system and have installed the WebGUI software.
2. Open the WebGUI, select the Logical tab. Click “Create Array”, and configure the array as desired using the drop-down menus and selection boxes. Once configured, click the “Create”button to create the array (the example below shows 2 NVMe SSD’s configured as a RAID 0 array).

3. Once the array has been created, it will be displayed under **Logical Device Information**.

Logical Device Information						
Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status
VD_0	RAID 0	1.00 TB	128k	512B	HighPoint SSD6202	Normal Maintenance
Physical Device Information						
Location	Model	Capacity	Max Free			
1/1	Samsung SSD 970 EVO Plus 500GB	500.10 GB	0.00 GB			
1/2	Samsung SSD 970 EVO Plus 500GB	500.10 GB	0.00 GB			

**Method 5: Create a RAID array in CentOS 8.3 using the CLI Tool**

- a. This method assumes that you have already prepared a CentOS system.
- b. Boot the system, and enter the username and password to start CentOS.
- c. Copy the CLI package into the root directory of a USB flash drive. Use the following command to copy the mnv\_cli package to home directory:

```
cp mnv_cli /home
```

```
[root@localhost mnt]# cp mnv_cli /home/
[root@localhost mnt]# cd /home/
[root@localhost home]# ls
mnv_cli  test
```

- d. Access the home directory and enter the following command to start the CLI:

```
./mnv_cli
```

```
[root@localhost home]# ./mnv_cli
CLI Version: 1.0.0.1041
Welcome to NVMe Command Line Interface.
```

- e. To create a RAID0 array using Two NVMe SSD's, enter the following command.

```
create -r 0 -d 0,1
```

```
> create -r 0 -d 0,1
Create virtual disk successfully.
> _
```

For more CLI commands, please download the CLI manual from the product page of the official website.

## Step 3 Adjust the Motherboard BIOS Settings

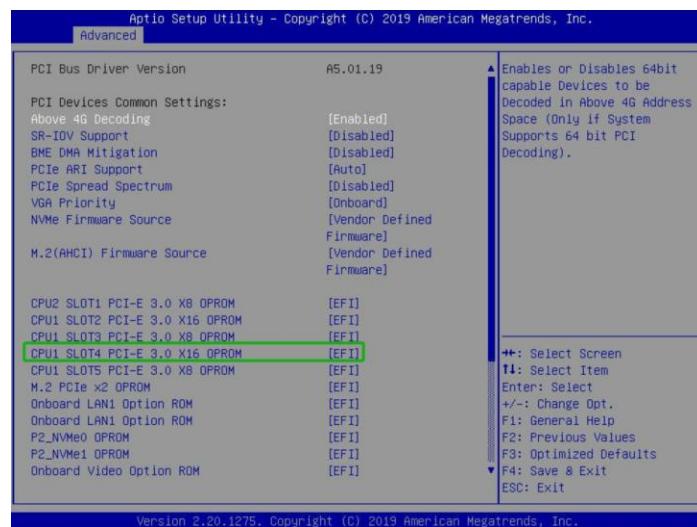

*Using the Super Micro H11DSi motherboard as an example:*

1. In the system BIOS SETUP menu, change ‘Boot mode select’ to ‘UEFI’;

2. Under "Advanced→PCIe/PCI/PnP Configuration, change the setting for “CPU Slot x PCI-E OPROM” to "EFI". “x” refers to the slot number (slot 4 was used when the screenshot

was taken). Please consult the motherboard manual for more information.

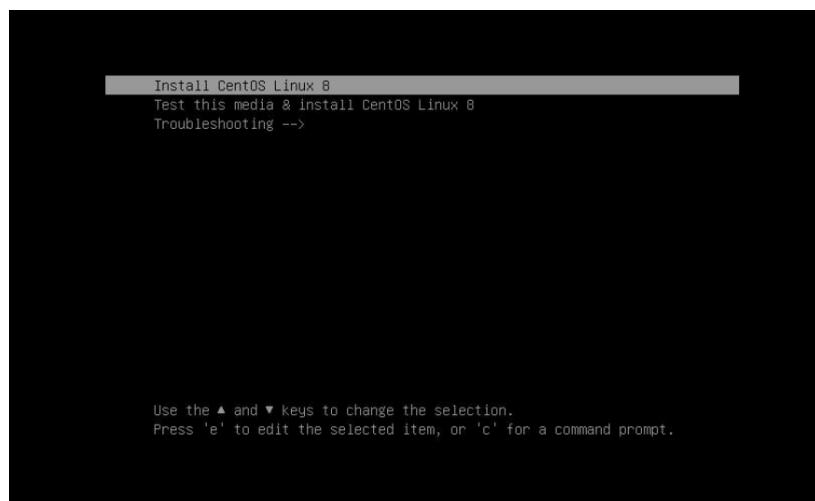

### 3. Set "Secure Boot" to "Disabled".

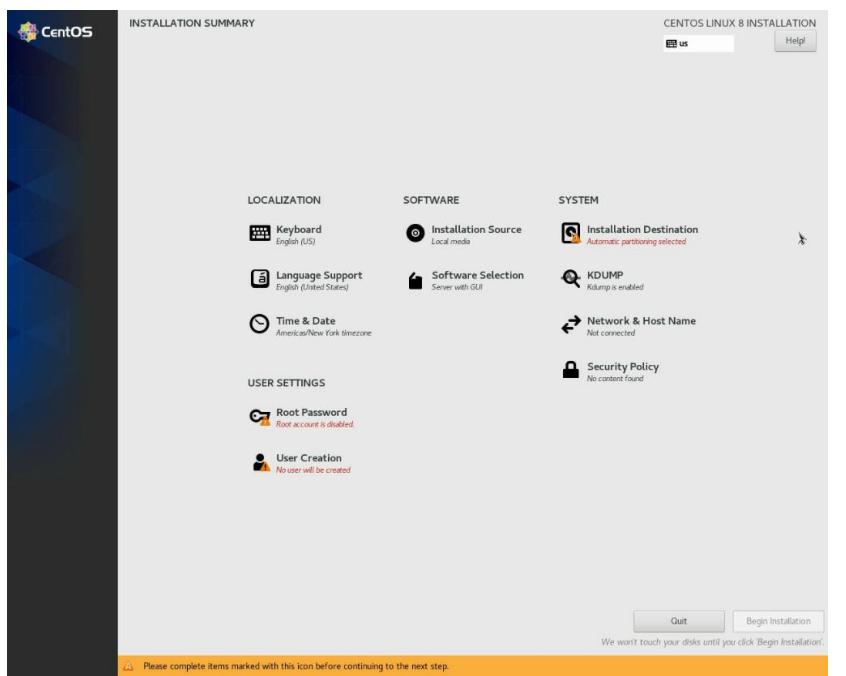

## Step 4 Install CentOS 8.3 to the SSD6202

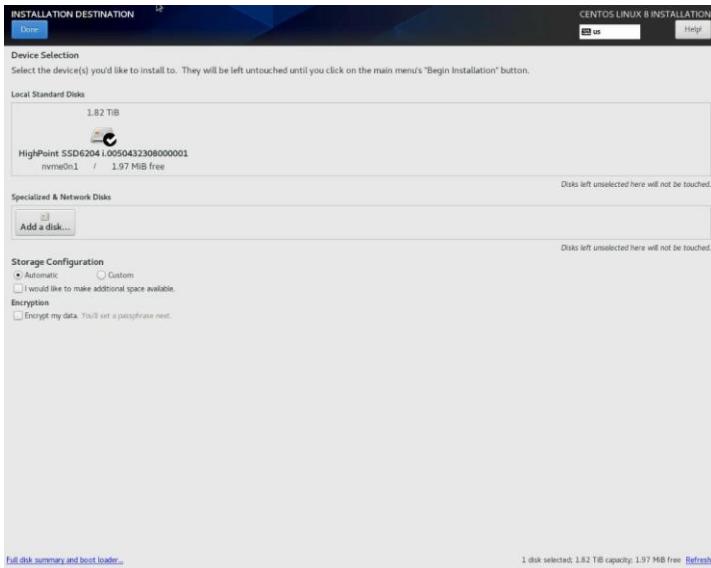

1. Boot from the CentOS 8.3 Installation DVD (UEFI mode).
  - a. When the Installation screen appears, please select "**Install CentOS Linux 8**" to install CentOS 8.3.

2. When the installation switches to the graphical interface, click "**Root Password**" and "**User Creation**" to set username and password, then click "**Installation Destination**" to select the target disk for installation.

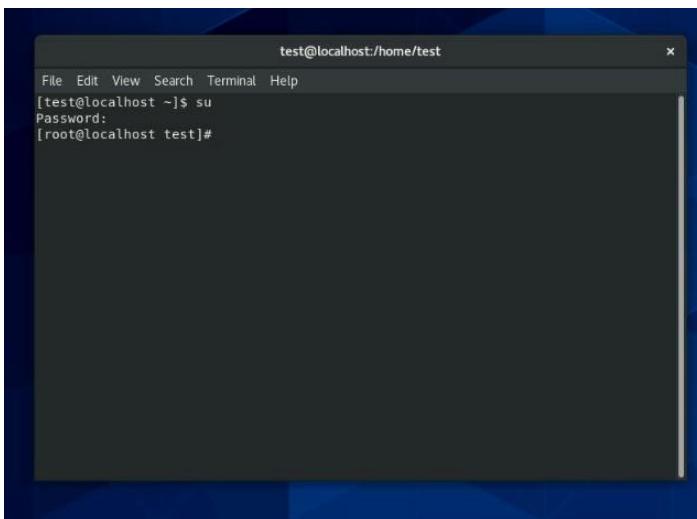

3. Select the RAID array as the target disk to install the CentOS 8.3. You can then proceed normally - follow the onscreen prompts to install CentOS 8.3 to the array.

4. After installation is complete, select the appropriate startup item to enter the system.

5. Enter the user name and password, to log into CentOS 8.3.

## Appendix

### Troubleshooting

#### 1. The CLI reports that “No NVMe Controller is found”

- 1) After starting “mnv-cli.efi”, the utility reports “**No NVME Controller is found**” (as shown below):

The screenshot shows a terminal window with the following text:  
management CLI\1.0.0.1041\_sign\uefi\64\> mnv\_cli.efi  
**No NVMe Controller is found.**  
CLI Version: 1.0.0.1041  
Welcome to NVMe Command Line Interface.

- 2) You will need check and make sure the system recognizes the SSD6202. First, enter the following command using the UEFI tool:

```
pci -b
```

The screenshot shows a terminal window with the following text:  
FS0:\> pci -b  
[empty output area]

- 3) If the interface reports “**Vendor 1B4B Device 2241 Prog Interface 2**”, the SSD6202 is recognized by the motherboard, but cannot support the UEFI tool. In this case, you will need to create the array using one of the other methods described in this manual (BIOS, CLI or WebGUI).

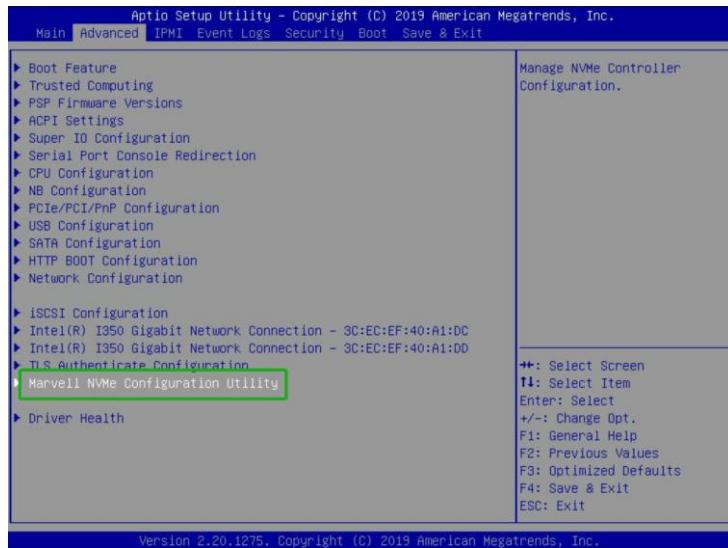

The screenshot shows a terminal window with the following text:  
00 08 00 00 ==> Mass Storage Controller - Non-volatile memory subsystem  
em  
Vendor 1B4B Device 2241 Prog Interface 2  
FS0:\> FS0:\-

- 4) If the interface does not display “**Vendor 1B4B Device 2241 Prog Interface 2**”, then the motherboard does not recognize the SSD6202.
  - a. Power down the system, and make sure the SSD6202 is securely installed into the PCIe slot
  - b. Boot the system and enter the motherboard BIOS utility. Make sure the required BIOS settings are still enabled (refer to page 1)

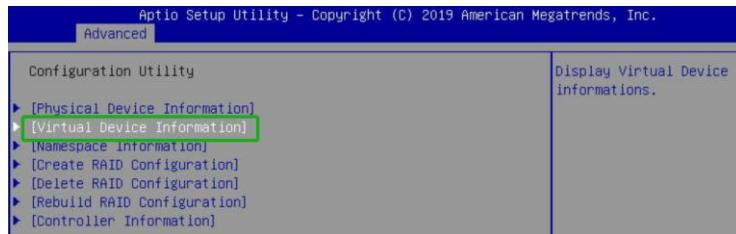

#### 2. Check the RAID create via RAID Switch settings is created or not

##### Method 1: Check in BIOS Utility

- 1) Set the Slot Storage OPROM of SSD6202 in the motherboard BIOS to UEFI.
- 2) Set ‘Boot mode select’ to ‘UEFI’.
- 3) From the motherboard BIOS menu, select “**Marvell NVME Configuration Utility**”:

#### 4) Select the “Virtual device information”

#### 5) Select the “[0] New\_VD”:

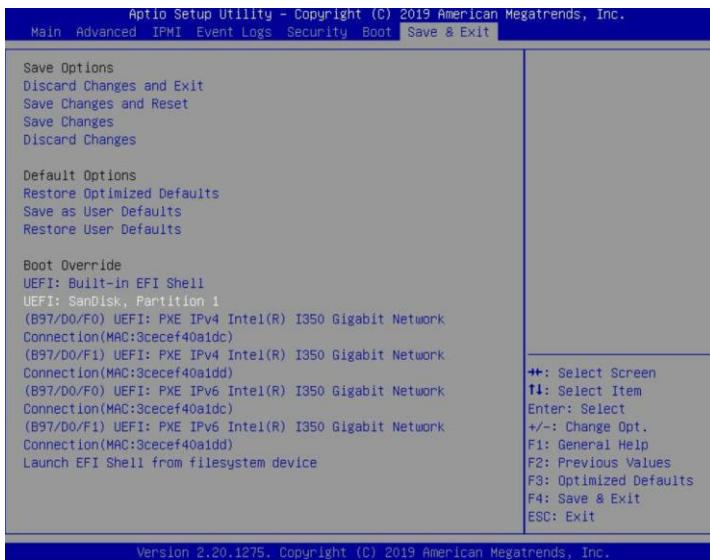

#### 6) As shown in the figure below, you can see the RAID0 information.

Detail Information	
ID	0
Name	New_VD
Status	Functional
BGA Type	NONE
BGA Status	NONE
RAID Level	RAID0
Member Count	2
Member ID	[0] [1]
Stripe Block	128K
Size	931GB

#### Method 2: check in UEFI

1. Choose to boot from the USB flash drive (shown as “UEFI: SanDisk, Partition 1” for the example below):

2. Next, locate the “mnv\_cli.efi” program and run it:

```
FS0:> cd uefi\64
FS0:\uefi\64> mnv_cli.efi
CLI version: 1.0.0.1041
Welcome to NVMe Command Line Interface.
```

3. you can recognized the RAID0 by entering the following command:

**info -o vd**

```
> info -o vd

VD ID: 0
Name: New_VD
Status: Functional
Importable: No
RAID Mode: RAID0
size: 931 GB
PD Count: 2
PDs: 0 1
Stripe Block Size: 128K
Sector Size: 512 bytes

Total # of VD: 1
```

### Method 3: check in a windows operating System

1. This method assumes you have access to a Windows Server 2019 system and have installed the WebGUI software.
2. Open the WebGUI software, it will be displayed under **Logical Device Information**.

The screenshot shows the software's main window with several tabs at the top: Global View, Physical, Logical (which is selected), Setting, Event, and SHI. On the left, there's a sidebar with options like Create Array, Logical Device, and Rescan. The main area is divided into two sections: Logical Device Information and Physical Device Information.

**Logical Device Information:**

Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status
VD_0	RAID 0	1.00 TB	128k	512B	HighPoint SSD6202	Normal Maintenance

**Physical Device Information:**

Location	Model	Capacity	Max Free
1/1	Samsung SSD 970 EVO Plus 500GB	500.10 GB	0.00 GB
1/2	Samsung SSD 970 EVO Plus 500GB	500.10 GB	0.00 GB

#### Method 4: check in a CLI

1. This method assumes that you have already prepared a CentOS system.
2. Refer to “**Step 2 Create an array→Method 5**” to install CLI tool in the system.
3. Run CLI by the following command:

```
./mnv_cli
```

```
[root@localhost home]# ./mnv_cli
CLI Version: 1.0.0.1041
Welcome to NVMe Command Line Interface.
```

4. you can recognized the RAID0 by entering the following command:

```
info -o vd
```

```
> info -o vd

VD ID:          0
Name:           New_VD
Status:         Functional
Importable:    No
RAID Mode:     RAID0
size:          931 GB
PD Count:      2
PDs:           0 1
Stripe Block Size: 128K
Sector Size:   512 bytes

Total # of VD:  1
```
