## Data RAID Prerequisites

Data arrays are used exclusively for storage – they cannot be used to boot a system.

1. You must have at least one NVMe SSD installed into the SSD7104/SSD7204 controller.
2. The SSD7104 must be installed into a PCIe 3.0 and 4.0 x16 lanes.
3. The SSD7204 must be installed into a PCIe 3.0 and 4.0 x8 or x16 lanes.
4. Operating system:
  - Windows 10 / Windows 2016 / Windows 2019
  - A Linux Distribution with Kernel 3.10 and later
  - macOS 10.13 and later
5. A motherboard that can support UEFI modes. Please check the [SSD7104 Compatibility List](#) and [SSD7204 Compatibility List](#) for recommended motherboards.

## NVMe Drive Installation:

### Take SSD7204 as an example:

Step 1. On the rear of the SSD7204, remove the six screws that secure the unit's heat sink to the PCB.

After removing the screws, carefully remove the heat sink from the SSD7204.

Step 2. These 4 screws are used to install the NVMe SSD's.

The SSD7204 can support any M.2 form factor (2242, 2260, 2280, and 22110).

Step 3. Please remove the screws on the right side of SSD7204

Step 4. Gently insert the SSD into the slot.

Step 5. Refasten the screw to secure the SSD.

Repeat Steps 3 to 5 to install the remaining SSD.

The following example shows four SSD 970 EVO Plus installed into Ports 1 and 4;

Step 6. Replace the heat sink after installing all SSDs

Step 7. On the rear of the SSD7204, refasten the six screws that were removed in step 1.

## Resources

A variety of manuals, guides and FAQ's are available for the SSD7104 /SSD7204 RAID controller.

In addition, we recommend visiting the Software Downloads webpage for the latest drivers, management interfaces, and installation guides.
